

**Mobile Pilot Station
Wet Absorber / Wet Electrostatic Precipitator
Volume of Waste Gas 2,000 – 3,000 m³/h**

Based on decades of experiences with dry and wet electrostatic precipitators, wet absorbers, centrifugal separators and fabric filters EWK Umwelttechnik began years ago to utilize its experiences from particular industry sectors for new fields of application.

Since quantitative and qualitative conclusions about emissions are often insufficiently available and efficiency of the cleaning system to be constructed is of great importance, miscellaneous mobile pilot stations are provided for practical analysis.

If necessary and before respective application, the pilot station is retooled according to our experiences and calculations to the existing information about the waste gas consistency.

That way the fictitious industrial solution can already be tested in practice. Through improvement during experimentation the intended precipitation efficiency can yet be increased in almost all processes.
